

Photocontrols are no better than their weakest link.

Circuit Boards - Research at Ripley Lighting Controls has shown that when it comes to product reliability and performance, **circuit boards** are often the weakest link.

Competitor's Circuit Boards

Single-Sided

Single-sided circuit boards cost less initially, but significantly compromise durability, long term performance, and reliability.

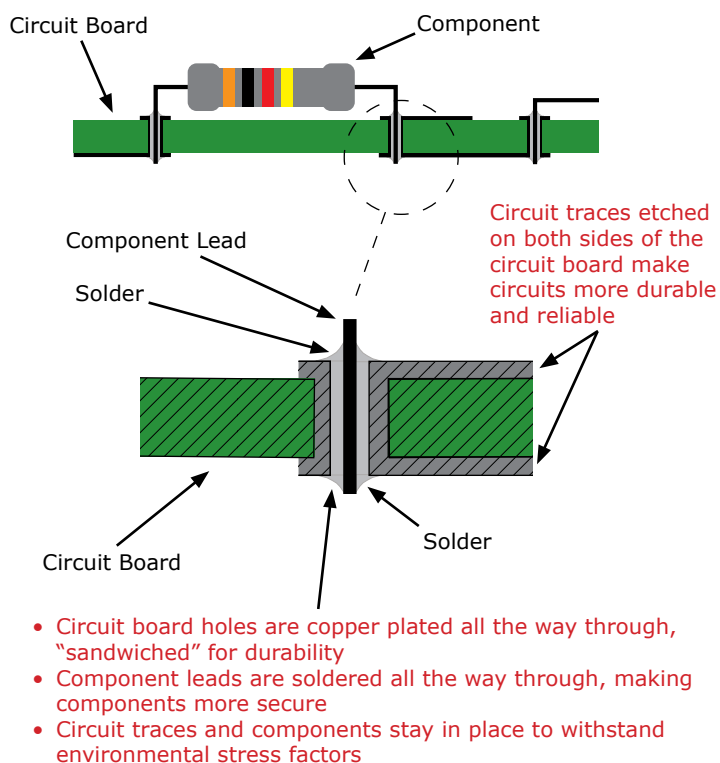

Single-Sided Boards
+
Environmental Conditions
= **High Risk of Failure,**
Higher Maintenance
Costs

Ripley Standard Circuit Boards

Double-Sided Plated-Through (DSPT)

Ripley photocontrols, engineered for durability and reliability, are manufactured exclusively using Double-Sided Plated-Through Circuit Boards (DSPT).

Focused on quality and value, Ripley exceeds industry standards.

Double-Sided Plated-Through (DSPT)
= **Reliability,**
Durability,
Long-term
Performance
